PROFILE

I am a recent software development graduate looking to reach my full potential both professionally and personally. I am seeking an environment where I can learn, be challenged and motivated to excel.

EDUCATION & ACADEMIC ACHIEVEMENTS

Bachelor of Science   January 2015 - May 2021

Computer Science (Recent Graduate)

University of Manitoba

High School Diploma   September 2006 – June 2012

Lifeforte International High School

WORK EXPERIENCE

Program Intern - **Database Developer**   September 2020 – April 2021

Agriculture and Resource Development

Government of Manitoba

- I had the opportunity to work on a database need this particular department had

- They needed to have a central location for storing and managing data while being able to generate reports from the one location

- The database had to be distributed to allow for concurrent use by multiple users

- I was tasked with understanding their needs, recommending a solution and implementing said solution

- With minimal supervision and frequent communication, I was able to build a database and a query system that was easy to manage and use

- My excellent written and verbal communication skills helped me get these ideas across to relevant stakeholders within the department

- At the end of my 8 months internship, I had successfully built a database, view and report generation system for the department

- They now had one location for all data, that allowed multiple users and generated reports at the click of a button

PROJECT EXPERIENCE

My Portfolio

- Built using plain HTML, CSS and Javascript

- I needed a clean, responsive and detailed portfolio to showcase the skills I had recently picked up using these languages

- I was happy with how it turned out as I was able to design, code and deploy the website with help from online resources

- I used mobile first development to ensure the website scaled up nicely from mobile to small tablets, large tablets and then desktops

- Find the code here, view live here

Client Portfolio

- Built using HTML, CSS and REACT

- This client needed a portfolio to showcase the styling gigs she had done in the past

- I again used mobile first development to ensure the website scales up nicely from mobile to small tablets, large tablets and then desktops

- Using React allowed me to use a gallery library from npm

- All the image thumbnails had to be deliberately scaled to ensure they appear the right ratio as the website becomes responsive

- Find the code here, view live here

Consuming API in Java

- This tutorial style project was built using JAVA

- The goal was to learn to build a Java application using Spring and to also have the application consume an API

- I also wanted to learn to teach and explain my code. So I wrote up a detailed tutorial about this which can be found on my website

- Find the code here

Random Jokes

- I wrote this React client that consumes a jokes api

- I wanted fun project to practice consuming an API using React

- I quickly found that I was drawn to using React hooks as opposed to writing a class

- I found a nice and easy API here that provided the jokes and made it easy to consume

- Find the code here, view live here

TECHNICAL SKILLS

- Java

- SQL

- Git and GitHub

- HTML, CSS, Javascript

- React

- C/C++

DECLARATIONS

- Legally entitled to work in Canada - Work Permit
